

Seahorse™ S30 Kontiki

- The New Seahorse™ S30 comes with the proven Mercury 30lb thrust motor. This motor delivers the power you need to tackle the conditions you normally go fishing in. Perfect for the east coast beaches and the calmer days on the West Coast. It is not recommended for tackling the massive surf conditions you can sometimes get on the west coast beaches.
- The New Seahorse S30 will travel up to 100 metres per minute, when used with the braid winch, so your baits will get to the fish quicker. The two blade prop is cut down to deliver more power with less drag, therefore giving better performance.
- The New Seahorse S30 is the lightest Kontiki anywhere. At only 8.1kg's with it's lithium battery, no-one else is close. (The lightest we could get our GPS Seahorse 30 was 14.5kg's.) This means it is easy to carry to your favorite fishing spot, and is easy to launch. Being light, we can design a lot of the buoyancy out of the design, reducing drag, and improving performance. It's like dropping a V8 into a mini.
- The New Seahorse S30 has been designed to the highest standards by our team of Kontiki experts at Seahorse. We have used all the lessons we have learnt since Seahorse started in 2001. The New Seahorse S30 is built to the same high standard as our existing models, plus there are a number of innovative ideas incorporated into the design. Because of this, we can offer our 24 month warranty and 30 day money back guarantee.
- The control unit in the New Seahorse S30 has all the features you have come to expect from the Seahorse Kontikis, plus a few new ones. We now use a hand held programmer that is linked to your kontiki only. Once the programmer is linked to operate your kontiki, No other programmer can operate it.
- The Control unit has built in stall protection, low voltage cutout, and a minute by minute timer. You can set your New Seahorse S30 to run from 1 minute up to 30 or more minutes for a full run. The hand held programmer can also be used to stop and start the New Seahorse S30 Kontiki within 300 metres of the shore. After that, it is out of range.
- The Patented Seahorse GPS Autopilot system will steer your New Seahorse S30 Kontiki towards a waypoint 3km's offshore, keeping it on course through the surf, shoreline rips and currents flowing down the beach.
- The new lightweight low buoyancy, low drag design ensures the New Seahorse S30 will dive under the surf and cut through any rough water quickly ensuring it gets to your fishing spot with the minimum of effort. The design also allows for easy retrieval ensuring maximum life from your winch battery.
- The powerful 10ah lithium battery will run the 30lb thrust Mercury motor for up to 22 minutes, meaning they greatly out perform the traditional heavy lead acid batteries. The Lithium battery is only 1.5kg's making it easy to carry extras for a full days fishing.
- The New Seahorse S30 has the innovative feature of separating into two parts. This allows us to use the tail section as the "Hatch", as the batteries are inserted through the opening at the join of the two parts. The hinge and latch system guarantees complete watertightness, in a foolproof system anyone can operate. There is no more remember to "do up" the hatch. By separating into two parts, the New Seahorse S30 is easy to store into small spaces in cars, caravans and motor homes.
- The two sections of new Seahorse S30 kontiki is held together with a self locking hinge and the positive action latch with locking pin pulls everything together and

closes the battery opening. With the locking pin in place, the latch is 100% secure ensuring a watertight seal.

- The New Seahorse S30 has a offset towpoint ensuring the Mercury motor delivers all it's power to going forward, and the autopilot isn't having to battle against bad design.
- Each New Seahorse S30 Kontiki has a unique serial number to ensure positive identification of each unit. Being New Zealand's most popular kontiki unit, you'll see them being used widely throughout New Zealand. Seahorse maintains a register of owners for your benefit. - If you buy from one of our retail partners, please complete the warranty form and return it to us
- The New Seahorse S30 Kontiki is the next generation of Kontiki's. We use the latest technology and ideas to bring to you all the features you have been looking for in a Kontiki.

Seahorse™ Braid Winch

- The Seahorse™ Braid Winch contains your mainline, and a 80 stoppered section and 100 metre leader.
- Please note the winch design has changed and new pictures will be coming soon.
- The 10ah Lithium battery provides enough power to recover for three line retrievals
- The 10ah Lithium battery has a built-in battery management system to ensure the battery is fully protected, ensuring long life. But once the battery is ran flat, the BMS will turn the battery off, until it is recharged.
- It's advanced design makes it simple to operate and easy to clean, with the motor and control unit fully protected behind the side cover.
- The drum is located to keep the braid line as close to the sand as possible, allowing he pull of the line to force the Winch into the sand. Please note, given the light weight of the Winch, it is likely to move sooner than heavyweight traditional winches.
- The non stretch braid line removes the need for a drag or brake system
- The 1.2mm Dyneema braid line is 300lb/140kg breaking strain. Being smaller in diameter, it is less likely to be pulled sideways by currents and rips, plus we weight the line with a 1/2oz (20 gram) sinker every 100 metres to help hold the line in place.
- The Dyneema braid is constructed from 8 individual strands, meaning if one is broken, the other seven will take up the strain. If the line is damaged, simply cut out the damaged section and tie together with a double or back to back uni knot, and you are back fishing.
- Simply connect the Winch line onto the carabina on the S30 kontiki.
- All the wiring is done with marine grade tinned wire to ensure it can handle the tough marine environment
- The powerful 150 watt motor and electronic control unit is protect under the side cover. The control unit is also fully encased in epoxy resin to ensure total protection
- the simple three control unit with on/off and Pulse ensures you get full power and control to the Winch whenever you need it
- The battery holder will also hold the Seahorse™ remote programmer.
- A full 24 month warranty and support provides carefree operation. Call us anytime if you have a query regarding the operation of this Winch

Seahorse™ "Clip & Go" Traceboard

- The strong aluminium frame is light weight and does not hold the smell of the fish or baits. Its design means it can be cleaned easily, and this keeps the traces and the board in top condition.
- The convenient two sided design reduces the size of the traceboard while maximising the spacing between hooks increasing baiting options.
- The traceboard is specifically designed to handle long trace, which has proven more successful.
- The Seahorse™ designed and machined, trace and hook holders enable the traces to be held with minimum tension ensuring easy and safe operation.
- Seaharvester clips and longline hooks bring commercial know-how and techniques to recreational fishing. While there are a number of techniques for attaching traces to the mainline, we have found the Seaharvester clips are the quickest, easiest, and safest method of attaching traces.
- There are Ten spare pre-tied traces included with our traceboard (in addition to the 26 on the board).
